Application

Spray method
The cleaning water is applied to the floor directly in front of the mop, then the surface is wiped.

Preconditioned method
For optimum results, dampen the mop with cleaning water amounting to 180 % of its own dead weight.

Bucket method
For optimal moisture and a single-step wiping process, dip the mop fully into the cleaning water, allow it to absorb as much water as possible and then wring it out in the press.

Properties

- Efficient: the tufted loop system ensures direct fastening of the yarn to the backing layer and guarantees a long life of the mop
- Increased resistance: the double seams at the areas with the greatest stress ensure a longer life in the case of frequent use and washing
- High absorption capacity: the narrow structure of the yarn ensures a high area performance and saves water and detergent
- Versatile: the combination of different fibres allows various operations to be performed with a single mop
- Powerful: the cleaning solution is evenly distributed on the floor which makes cleaning easier
- Simple: quick and easy change of the mop

Washing instructions

- Do not wash with other textiles
- Do not use bleach, softener or strongly alkaline detergents
- Washing or drying at high temperatures can damage the fibres
- Thoroughly rinse the textile before washing it
- Please do not dry in the dryer
